

Viacheslav Pustovit

Frontend Developer - React / Next.js / TypeScript

Frontend developer with experience since December 2020. I work on interfaces where performance, SEO, accessibility, maintainability, and clear code structure matter. Main experience: e-commerce, CRM, marketplaces, Telegram mini apps, and commercial landing pages.

Russia, Sevastopol | +7 978 316-53-15 | webslava92@gmail.com | TG: @webslava92 | MAX: max.ru | github.com/gitslava92

Key skills

React, Next.js, TypeScript	JavaScript, HTML, CSS	SCSS Modules, responsive UI
SEO, Core Web Vitals	Accessibility, semantic HTML	REST, GraphQL, Apollo
OpenAPI, useSWR, WebSocket	React Hook Form, TanStack Table	Git, Docker, Storybook, Vitest

Experience

Unicorn ИП Брагин И.В.

May 2025 - present

Frontend Developer

Team work on developing high-load resources. The project included web versions of poizonshop.ru and unicorngo.ru, a CRM for content management, process automation, and interaction with customers, suppliers, and delivery, plus a Telegram mini app. Workflows were based on Scrum and GitFlow.

Responsibilities

- Optimized structured data, prioritized component and image loading, optimized the bundle, improved site loading speed, and moved SEO-significant page data to server-side rendering.
- Developed catalog and brand tree management through the CRM with automatic page generation for popular search queries.
- Automated page submission for indexing in Google.
- Developed product entities and flows: carts, orders, points, curated collections, favorites, and administration of all of these. Completed the rebranding of unicorngo.ru.

Results

- *Significantly improved site SEO metrics: the number of pages in Yandex search grew by roughly 10x.*
- *Core Web Vitals/Lighthouse quality metrics improved by roughly 30%.*

Stack: TypeScript, Next.js, useSWR, OpenAPI, SCSS Modules, React Hook Form, Framer Motion, Docker

Profital Coypc ООО

Dec 2020 - May 2025

Frontend Developer

Team work on building the complex high-load Profital marketplace platform and CRM components for E-deal/Thailhook. Workflows were based on Scrum and GitFlow.

Responsibilities

- Developed and participated in almost all parts of the project: React Router routing, JWT authorization, complex multi-page forms with react-hook-form, TanStack Table tables, Material UI and Styled Components styling, ApexCharts charts and diagrams, React Spring animations, and i18n localization.
- Built complex marketplace business logic from scratch: offers, responses, deals, payments, reviews, ratings, disputes, chats, currencies, wallets, and administration of these entities.
- Implemented chats and event notifications based on Mattermost API and WebSocket, filled Storybook, and wrote Vitest tests.

Results

- *Developed or refactored most key product modules and quickly took on tasks involving unfamiliar code and implicit dependencies.*
- *Supported interface quality through component maintenance, Storybook, Vitest tests, UI regression fixes, and responsive layout improvements.*

Stack: React, TypeScript, GraphQL, Apollo, WebSocket, Redux Toolkit, TanStack Table, MUI, Vitest

Projects

Unicorn / Poizonshop

High-load e-commerce project: web versions of poizonshop.ru and unicorngo.ru, CRM, and Telegram mini app. SEO, performance, rebranding, catalog/brands, carts, orders, points, collections, favorites, and administration.

Stack: Next.js, TypeScript, SCSS, OpenAPI

Unicorn Telegram mini app

Telegram mini app for e-commerce flows: catalog, product pages, and user journey inside Telegram.

Stack: TypeScript, Next.js, Telegram Mini Apps

Commercial landing pages

Construction company websites: Grandstroy, Ums-stroy, Kamoza A.I. Responsive structure, UI, and content preparation.

Stack: React, Vue 3, TypeScript, SCSS

Education

Vadim Prokopchuk layout course - 2020 - 2021

from 0 to 1. HTML, CSS/SCSS, BEM, JavaScript and jQuery basics, Gulp, Git, responsive layout.

Higher education in economics - 1999 - 2004

DonDABA. Economics, marketing, management. Business economics.

Profitall

Marketplace for safe transactions. Built business logic from scratch: offers, responses, deals, payments, reviews, ratings, disputes, chats, currencies, wallets, and administration.

Stack: React, TypeScript, GraphQL, WebSocket

Csv-editor - archived pet project

Desktop app for validating, processing, and editing CSV files by custom rules.

Stack: Electron, React, TypeScript
